

## "Boiling Water Programmed To Your Need"

The first boiling water unit that actually pays for itself !

TIMERBOIL

Instant Boiling Water

ELECTRONIC TIMER AND TEMPERATURE CONTROL

Whelan-the company you can trust with over 30 years in the manufacturer of Boiling Water Units.

Australian Designed and Manufactured

The Whelan Timerboil represents a new trend in boiling water development. It has a built-in 24 hour 7 day timer, with seven independent ON/OFF settings to provide boiling water only when you are there to use it.

If programmed, the unit will automatically switch off during after hours and weekends to save you the standby cost. Our research has indicated the cost of convenience or the standby cost accounts for 60% of the total running costs for a normal office.

The Timerboil uses the proven solid state temperature controller to monitor its water temperature. It has a sensitivity of 0.1°C and accuracy to within 0.5°C of the set-point temperature to provide you with an endless supply of boiling water on tap.

It is supplied with a non-drip tap, a concealed plumbing option and wall mounting key holes for ease of installation. All 2.4 kW units are also fitted with a plug and lead.

### Optional extras

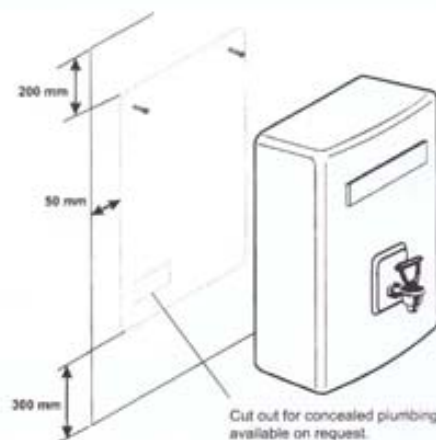

Additional outlets, swivel extension arms, filters and colour or stainless steel finishes are all available upon request.

Units requiring additional outlets will be supplied in powder coated steel casing.

### Specifications

Model No. (max)	No. of cups served	Total kW	Cup/Hr Recovery	Phase	Voltage	Height mm	Width mm	Depth mm
